New Organization, Credential Engine, Launches to Bring Transparency to Credentialing Marketplace

Nonprofit to announce innovations for credentialing system

WHEN: December 7, 2017, from 2:30 p.m.-3:30 p.m.

WHERE: Livecast. Pre-register [here](#) to receive a link to the December 7th livecast.

WHAT: Credential Engine has established new and easier ways to provide public access to credentialing information—and it's hosting a launch event on December 7, 2017 to announce how.

Credential Engine developed the Credential Registry, a first-of-its-kind centralized credential data platform. In addition to the Credential Registry, the organization is rolling out a common credentialing language to create credential comparability both in the Credential Registry and on the web, and a free app to search for information. By releasing these to the public, Credential Engine will gather credentialing information from all types of sources—from badges, apprenticeships, certificates and licenses to degrees, micro-masters, and Ph.D.s—to improve credential transparency.

Attendees will have the opportunity to learn about Credential Engine's mission, tools, newest partnerships and future planned developments, as well as get their questions answered.

Presenters for this event include:

- Wes Bush, President and CEO, Northrop Grumman Corporation
- Jamie Merisotis, President and CEO, Lumina Foundation
- Ted Mitchell, President, American Council on Education
- Eleni Papadakis, Chair, Credential Engine
- Elizabeth Shuler, Secretary-Treasurer, AFL-CIO
- Moderated By: Josh Mitchell, Staff Reporter, Wall Street Journal

###

Credential Engine is a non-profit organization dedicated to the mission of promoting transparency and credential literacy in the marketplace to reveal the world of credentials and inform the public.
