

Showcase: Digital Promise

Digital Promise's vision is for people to have access to learning experiences that help them acquire the knowledge and skills they need to thrive and learn in an ever-changing world. Micro-credentials earned through our platform recognize and verify the skills that people learn throughout their careers. Micro-credentials serve educators, schools, districts, states, employers, and professional development and training providers. We have hosted more than 800 micro-credentials on our platform with a catalog representing almost 100 issuing organizations. Almost 16,000 learners have earned our micro-credentials, providing flexible avenues to earn recognition for their skills.

With our commitment to supporting historically and systematically excluded learners, Digital Promise strives to support learners with equitable and transparent credential options. We use the CTDL to ensure adherence to transparent and consistent credential information for all our users. Digital Promise was the first organization to include links to the Registry in a large number of Open Badges, connecting these micro-credentials to linked open data.

We firmly believe in providing all users with access to our micro-credentials and promote transparency in the research used to determine how a competency was determined and evaluated. CTDL guides us to continuously improve on standards and data interoperability.

And because the Credential Registry is open and has ease of discoverability, it helps learners in finding micro-credentials, mapping them to their personal goals, and supporting them in envisioning their present and future in a successful way.
